

Cut boards out of square 29.5 in on edge. This square will provide base and end pieces. End piece profile board dimensions are shown. You will also need three sky-boards that could be hinged together and plastic for the front.

Sky-boards = 1 @ 24.75 W X 21 H and
 2 @ 12 W X 21 H.

Plastic front pieces 1 @ 24 W x 14 H and
 2 @ 11.5 W X 14 H

Design is planned for reversal of sky-boards and plastic depending on direction of corner.

Might consider sky-boards made out of 1/4" plywood. Not a structurally significant piece.

May need legs but plan is using clamps to attach to adjacent modules.
